

Acusafe develops innovative, cost-effective solutions to maximise the safety and comfort of patients, residents and staff – while reassuring families by demonstrating a secure and caring environment.

Enhancing health and well-being – and promoting quality of life – are what hospitals and aged-care facilities are all about.

Providing the right support tools and safety measures can prevent accidents and injuries, while encouraging recovery, mobility and independence.

Importantly, our solutions including the KAG Safety Rail are easy to clean to maximise hygiene and minimise bacteria growth in healthcare settings.

We are proud to help sick, frail and aging Australians – and their carers – to live everyday life with more confidence.

“We have found the KAG Safety Rail to be the most comfortable and easy to grip; it has given the residents more confidence when they grip the rails and they’re all very impressed with the look as well. Given any opportunity, this is the handrail of choice for this site for comfort, price and choice.”

## KAG Safety Rail

Using breakthrough technology and ingenious design, the KAG Safety Rail is simply your smartest step to enhancing safety and livability at your health or aged care facility.

With its unique swage design, it contours to the shape of a closed hand to reduce the risk of 'slip and fall' injuries and assist with movement.

Unlike smooth rails that often become slippery, the KAG Rail provides real grip – whether it's dry, wet or greasy.

Our fully patented technology transforms a conventional round tube into the uniquely contoured KAG Safety Rail. This changes its shape so it 'fits' any-sized hand to provide a new standard in grip and confidence.

**The KAG Safety Rail is life-giving and life-saving for all ages, and can be used for:**

- ▶ grip rails (for general mobility, exercise support and wet areas like hydrotherapy pools)
- ▶ shower assist rails and toilet assist rails
- ▶ bed rails
- ▶ straight disability rails
- ▶ towel racks
- ▶ safety balustrades

All Kag products can be fitted with fiber-optic end point lighting, which will reduce your carbon foot print and lower power bills. KAG with fiber-optics can be used in hall ways, all bathrooms and W.C areas.

### It's only fitting for a healthcare environment.

Adding to the KAG Safety Rail's hygienic properties, Acusafe has developed a fully sealed fixing to prevent the build-up of bacteria.

Unlike competing products, Acusafe's fitting solution offers outstanding cleanability with no gaps and being completely sealed.

It's also designed for easy installation and maximum strength, and is another example of Acusafe's world-leading innovations to enhance the health and safety of environments.
